Dear Hiring Manager,

I am writing to apply for the Software Engineer Intern position at Chime, which I came across on your company's website. As a Computer Science major, the unique features and challenges of designing and implementing systems for improving member satisfaction deeply intrigue me. I believe my skill set and passion for consumer FinTech align with Chime's mission and culture.

During my time at California State Polytechnic University, I have worked on several projects that required robust and scalable system design. Combining my technical skills and a creative thinking approach, I was instrumental in developing a customer support system as part of my semester project. My involvement in these tasks has not only honed my analytical skills but has also fostered my ability to manage complex projects.

I am a firm believer in constant learning and continuous improvement, which propels me to explore the changing landscapes of FinTech tirelessly. I am confident that I can apply the same zeal and enthusiasm to contribute to your Autobots team. Working alongside experienced engineers at Chime, I seek to learn, innovate, and drive impactful features leading to better member experiences. Furthermore, my strong communication skills enable me to work effectively with a wide range of stakeholders, supporting Chime's hybrid work policy.

Finally, I am equally excited about the opportunity to give back to the local community. To witness a company place such high importance on social responsibility is heartening. I am confident that working with Chime will not only be an enriching professional journey for me but also align with my personal values.

Thank you for considering my application. I am eager to discuss how I can contribute to the mission of Chime and look forward to meeting the team members.

Sincerely,

Akshat Bist
